

Git Hub Assignment Report:

Hello my name is Eli Jerald Rosales and I am summarizing my assignment in this Report.

Key Takeaways:

Part 1:

This part had no problems. Everything was done as requested

Part 2;

This part is the part I faced with problems. I was not able to complete the scatter plot.

Apart from that, the source files reasoning I had was simple. To verify if a file was a source file, we need to find if the extension for a file was written in one of the programming languages in the bottom right of the github repo. Just check the extension, if its a PL file then it is a source file.

For the plot formatting, I wasn't able to get the exact formatting as the example.

I imagine that the src files from the example were only from the src folder so in the future I would use that folder instead of ALL files that were a PL file.

Part 3:

This summary is the only requirement for this part. The people doing the MOST work would be Jesse and Daniel. Jesse would be the brains behind our whole project idea as well as setup for the project. Daniel helped with all around general stuff. PR review, group meetings etc.

Summary:

Though I was not able to finish part 2, I was able to make some progress. I did finish the csv file that asked for the author and dates of commits. The formatting for the file names need to be fixed as they only say the file path currently.

Future Corrections:

If I was given another chance, the things I would have done differently are:

- I would have given myself more time instead of starting it only two days prior to it being due.
- Asked my professor and TA for more help as I was just going through the assignment doing trial and error and hoping something "stuck".
- Quality control my code as it not the best quality.
