

Executive Summary

CS 472-1001 Lab 1 Part 3 (Status Report)

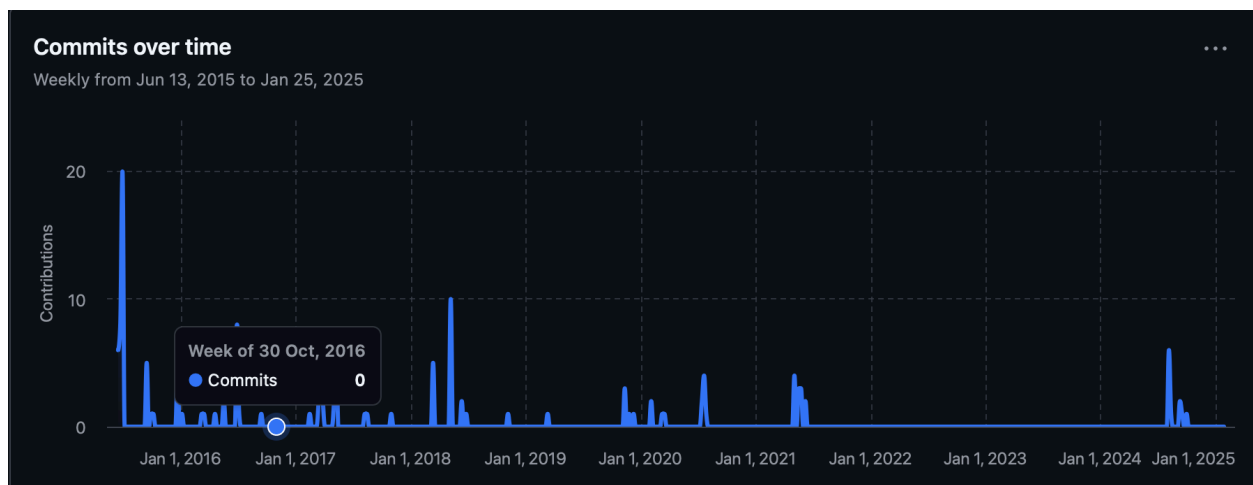

Ernesto Dones Sierra

FINDINGS

From the scatter plot graph, it's good to notice Scottyab (54 commits) and Stealthcopter (46 commits) had been the most active contributors to this app so we want to keep them as leaders of the projects since they have the most experience with the code. Also notice that most of the team members (contributors) for this project have had a really small amount of commits, usually they fix a small bug or implement a small new feature and leave the project behind.

I've added .h, .cpp, .xml, .java, .ks, and .kst as the source files in my search through the GitHub repository because those are either the programming languages used to create this project or (in the case of .xml) because it was used as the foundation block for exchange data between different systems and applications on their website.

From this graph we can see the project has had a stable healthy amount of commits ever since its creation, getting new features and regular updates implemented into the code. Therefore as a company, we should look into allocating more resources for it.
